

# eTICKET

Imagine an office where fee tickets are recorded as they are preformed – lab tests are ordered, recorded and procedures billed – without touching a single piece of paper. HealthCo made that dream a reality with eTicket. HealthCo eTicket is ideal for clinics that have not transitioned to Electronic Medical Records, while effortlessly integrating with those who have. eTicket gives physicians and administrators what they need, when they need it – minimizing costs and improving productivity and efficiency every step of the way.

## **ELECTRONIC ENCOUNTERS**

HealthCo eTicket can be accessed from any desktop or tablet PC. Tablet PCs provide the ultimate in mobility, weighing three pounds; they are roughly the size of a medical chart.

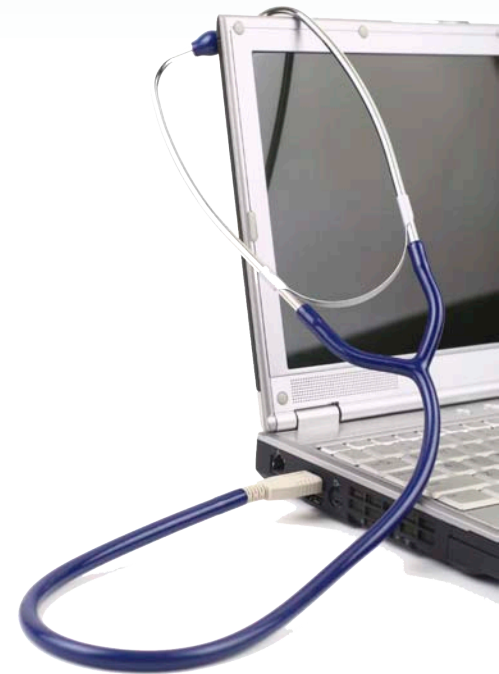

HealthCo eTicket enables physicians to access past patient visits, record rendered services, look-up diagnosis and procedures, and request a recall for follow-up appointments – all in a matter of seconds.

The wireless transmission of data provides physicians with up-to-the-minute information – current, fast and accurate – for improved decision-making. And because the Tablet PC is wireless, physicians can move freely from exam room to private office, while remaining in sync with Centricity CPO.

## **EASY FOR DOCTORS**

Transitioning from paper fee tickets to eTicket is easy because it looks identical to the paper encounter form. HealthCo eTicket electronic forms are customized to accommodate the unique requirements of a clinic, specialty or physician.

Because the eTicket replicates the familiar fee ticket forms, it is easy for physicians to learn and use. The intuitive screens and pull-down windows enable doctors to access, review, update, record, and submit encounter forms instantly. Completed fee tickets are ready for final administrative review and approval prior to final processing.

## **AN END TO THE PAPER CHASE**

Hunting down fee tickets can compromise both patient care and cash flow. HealthCo eTicket puts an end to delayed payment processing caused from fee tickets that are difficult to read, missing or incomplete. With eTicket every diagnosis, procedure, lab test and ancillary service recorded by the physician is simultaneously captured in Centricity CPO. No missing fee tickets, no manual entry.

HealthCo eTicket frees administrators from the rigors of managing paperwork. The endless hours and costs associated with manual data entry and fee ticket storage are virtually eliminated, while preserving administrative control. Built-in checks and balances ensure accurate and complete recording of patient encounters. Streamlined workflow. Real-time cash flow.
